

Hosted File Back-up for business

Keep your data safe with our cloud back-up service

AJPC solutions

Why choose Hosted File Back-up?

Your most important business asset is data. After all, without customer information, order details or product data, you will not be able to perform any business activities. Imagine partially or even completely losing your business data. It could mean the beginning of the end. At the very least, it would damage your company image.

Cloud Hosted File Back-up gives you the peace of mind that comes with the knowledge that your data is safely stored at all times.

Guaranteed data protection

Hosted File Back-up uses high-end storage equipment, which is located in physically secured datacentres. Due to an extensive SLA you can always access your backed-up data. Your data is stored redundantly in two physically separate locations, to ensure the availability of the data. The datacentre has multiple Standardization Certifications.

Back-ups of desktops, servers and mobile equipment

Hosted File Back-up can not only back-up data on your PC's and laptops, but it can also back-up data to mobile equipment. As soon as users log in to your company network from any location in the world, the back-up process will start. You will also be able to view and download your data from any location in the world via the Internet.

How does Hosted File Back-up Work?

Hosted File Back-up offers a cover-all, end-to-end solution for your backup issues. The solution creates a back-up of the data on all of your computers, irrespective of your location. The solution operates in a fully automated way, offering unrivalled ease-of-management and supports various operating systems.

It really is that simple.

Suitable for any operating system

Our Hosted File Back-up supports all popular operating systems. This means you are ensured of the right back-up capabilities now as well as in the future.

Technical features

Optimal security

Powerful encryption, Secure Sockets Layer (SSL) and SOAP message signing; these are just a few of the security technologies that ensure data is protected with our Hosted File Back-up. For instance, 256-bit AES encryption guarantees that any data you send via the Internet is always optimally encrypted.

- ✓ Windows, Mac & Linux support
- ✓ MS Exchange Server backup
- ✓ MS SQL Server backup
- ✓ MySQL database backup
- ✓ Open file backup
- ✓ 256-bit AES encryption
- ✓ Seed-load technology
- ✓ Pre & post scripts
- ✓ Web access to backed up files

Our Hosted File Back-up also offers powerful authentication capabilities, ensuring that only authorised parties are able to access your data. Hosted File Back-up uses excellent security techniques to ensure that back-up data is 100% private and not accessible to anyone but you.

External data centres

With cloud back-up, your data is sent directly to a secure external location. This eliminates dangers like theft and fire, which do affect local (tape, disk) back-ups..

Benefits to your business

Automatic

Backups are made automatically through a schedule. Therefore human intervention is unnecessary.

Peace of mind

Cloud back-up is 'fire and forget' software; once configured, it works fully automatically and you will receive emails with status updates.

High availability

With cloud back-up your data is continuously and directly available. When you lose data, you can immediately start with restoring your data.

And a few more...

Low cost of ownership

Cloud back-up needs to be configured once; thereafter all backups are executed automatically, saving you time and money

Easily restored

The restore of your data is very fast and easy. You select the backed-up data and choose the target location. In no-time your files and folders are back on their computer.

Versions

Cloud backup can keep a history of your file changes depending on your retention preferences. Changed files are stored as a new version; this allows you to go back weeks to restore the desired version.

Automatic reports, easy monitoring

Automatic reports in the software and through email make sure that you are always up to date about the status of your backups.

Start backing up your data securely today.
